

FREIGHT RUNNER®

Automated Solution For Loading Dock Safety

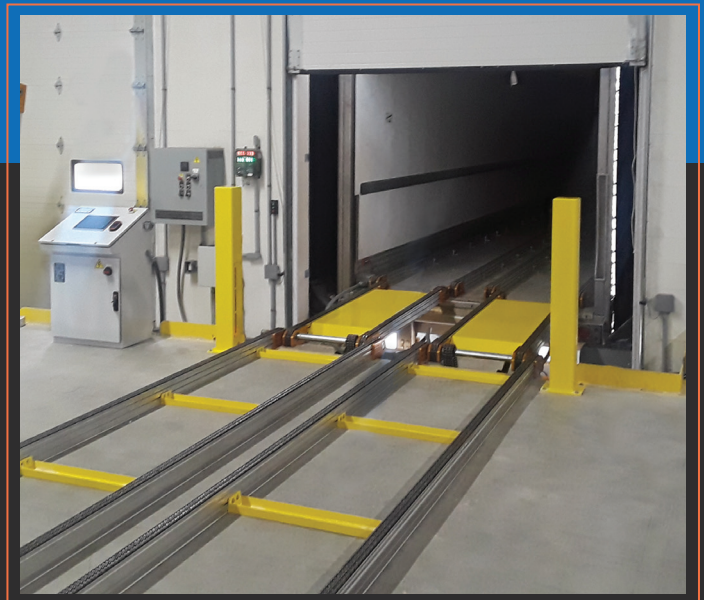

► PROBLEM:

Approximately 25% of all reported warehouse injuries occur on the loading dock.

► SOLUTION:

Reduce the risk with the KEITH® Freight Runner® Dock To Trailer System.

Automate the dock-to-trailer transfer of goods with the KEITH® Freight Runner® conveyor and replace the process that places employees at risk.

SAFETY FIRST

- Keeps personnel off the dock plate and out of the trailers, reducing fall risk.
- Removes employees from loading area, minimizing chance of being hit by equipment.
- Eliminates need for employees to handle products, decreasing lifting injuries.
- Reduces exposure to extreme heat or cold conditions.

CLOSED LOOP EFFICIENCY

- Load/unload times are as little as five minutes.
- Cost savings through reduction in product and trailer damage.
- Reduce direct labor costs using skilled employees in other capacities.
- Conveying system is designed for low maintenance requirements.

COST EFFECTIVE OPTION

- Easy install takes days, not months.
- Minimal facility modifications needed.
- Customized to fit existing facility footprint.
- Modular system can be expanded for future growth.
